The final decision as to manuscript acceptance rests with the editor in chief. The date of final manuscript acceptance and the name of the communicating editor follow each printed contribution.

Scope of Marine Biology

The Editors will consider for publication original contributions, preferably in English, to the following fields of research:

Biological Oceanography: Field investigations on status and causes of organismic distributions in space and time. Environment-organism and organism-organism interrelationships under *in-situ* conditions.

Cultivation of Marine Organisms for Scientific and Commercial Purposes: Studies on life cycles, and environmental and nutritional requirements under controlled conditions; aquaculture; diseases.

Experimental Ecology and Physiology: Analyses of environmental effects on functions (tolerances, rates and efficiencies of metabolism, growth and reproduction) and structures; experimental biosystems; adaptation; orientation; behaviour.

Ecological Dynamics: Studies on production, transformation and decomposition of organic matter in the marine environment; flow and balance of energy and matter; competition; food webs; population dynamics; community structures; use, protection and management of organic resources; effects of man, including pollution; commercial fisheries.

Evolution: Investigations on speciation, population genetics, and biological history of the oceans.

Theoretical Biology Related to the Marine Environment: Concepts and models of quantification and mathematical formulation; system analysis; information theory.

Methods: Apparatus and techniques employed in marine biological research; underwater exploration and experimentation.
